MARGINAL FALL IN OECD UNEMPLOYMENT RATE IN MARCH 2021 TO 6,5%

1.2 PERCENTAGE POINTS ABOVE PRE PANDEMIC

Paris, Washington DC, 11.05.2021, 03:32 Time

USPA NEWS - The OECD area unemployment rate continued to decline slightly in March 2021, to 6.5% (from 6.6% in February 2021). It remained 1.2 percentage points above the rate observed in February 2020, before the COVID-19 pandemic hit the labour market. In March, a marginal decline of the unemployment rate was also observed in the euro area, (to 8.1%, from 8.2% in February 2021), where the largest falls (0.2 percentage point or more) were registered in Finland (to 7.7%), Lithuania (to 8.9%), Portugal (to 6.5%) and Spain (to 15.3%)." Source: OECD

The OECD youth unemployment rate (people aged 15 to 24) decreased further in March, to 13.3% (from 13.6% in February), still 2.0 percentage points above its pre-pandemic level (February 2020). More generally, it should be noted that unemployment statistics do not account for the full amount of labour market slack due to COVID-19, as some non-employed people may be classified as "out of the labour force" [?], because, due to the pandemic, they are either not able to actively look for a job or are not available to work.
